Initial Prompt

Create a one page website for a home product page.
Include product description, features, pricing, call-to-action.
Use a clean, homey design with a white and green color scheme.
Make it responsive on desktop and mobile.

Refinement Prompts

Add more distinguishable borders for contrast and don't make the bundles subscription plans.
Add low-opacity images in the background to make the page feel less empty.
Make them slightly more visible and use stock images instead if possible.
Make the background for each section one image only.

Final Reflection

What worked well?

The overall design of the website came out as expected, sporting a clean and minimalistic look reminiscent of most websites you would see today. It also went and explained its process as it tries to fulfill your prompt, giving transparency to the user of what occurs in the background to make the output come to life.

What needed manual fixing?

The things that needed manual fixing were the images as before the final prompt, stock images took the place of the AI-generated images in the same position, making it look like the images were just placed randomly in no order.

What did you learn about prompting?

It is best to start off very specific with your first prompt right from the get-go as it significantly decreases the amount of time needed to refine your outputs with future prompts. When it understands your first prompt, the more likely it is that you get your desired output, only needing minor enhancements to complete it.
